

Testimonials

Martin Hall, The Golf Channel, West Palm Beach, FL

With your eye and video you can only see so much, but TOMI is so much better than the video. With TOMI, I can capture numerous readings at one time and quantify some things that by the naked eye you just can't do. It's the best piece of putting technology that I've seen to date. If you're a serious golf instructor and you're not using the TOMI, you're not being the best teacher you can be... you've got a piece missing.

Mike Shannon Putting Instructor, Sea Island, GA

With TOMI, you get information you can't see, and as a result, you can really help a player become a better putter.

I work with 35 players on the PGA tour and they are really amazed at how simple it is. They really do like the program.

It really does isolate the problems for that player and it gives that player a chance to improve.

Martin Mills is a Titleist Performance Institute (TPI) Certified Golf Fitness Instructor (CGFI), Certified Golf Professional, a Fit²Aim Putter Fitting Specialist, a member of the Golf Clubmaker's Association of America (GCA), the former AimPoint Instructor for BC Southern Interior and a Certified Personal Trainer with a Specialty in Nutrition and Weight Loss. Martin has won numerous tournaments throughout the Okanagan region, is the two time club champion at Gallagher's Canyon Golf and Country Club as well as the 2010 Senior Champion for the United States Golf Teachers' Federation!

Fit²Aim & TOMI Putting Analysis

TOMI (The Optimal Motion Instructor) is a breakthrough new putting training system designed to help golfers understand the flaws in their putting strokes, fix those flaws, and sink more putts! Utilizing high speed cameras and sophisticated computer software, **TOMI** analyzes 8 critical functions of your putting stroke:

- Alignment at Address
- Alignment at Impact
- Path at Impact
- Stroke and Path Rotation
- Shaft Angle
- Impact Spot
- Speed at Impact
- Stroke Tempo.

What is the Fit²Aim Method?

Using a laser we check how accurately you are aiming your current putter. Aim changes with every putter you use. So finding a putter that you can aim in a repeatable and efficient manor is the way to go. The photo sequence below demonstrates part of the process! Then, using the Fit²Aim Laser system, we check each component of your putter:

- Length
- Loft
- Head style
- Grip
- Check out the changes with the TOMI Pro system
- Lie angle
- Offset
- Alignment aids
- Counter Weighting

There are millions of different combinations that can be tested, ensuring a unique, custom fit putter designed especially for you!

Considering that 40-45% of your total score is going to be with the putter, doesn't it make sense to have something custom fit to your unique abilities? The Pro's do and so should you! Jon Karlsen's study from the Norwegian School of Sport Science in 2010 revealed that over 34% of missed putts were due to poorly fit equipment.

Whether it is tweaking your existing putter or fitting you for a brand new putter our process goes above and beyond.
